

PLAY INDOOR BEACH VOLLEYBALL WITH ALL OF THE SAND & NONE OF THE DUST.

ArenaKleen®
ALL OF THE SAND NONE OF THE DUST

**ArenaKleen® Creates Green
"Clean-Air Environment"
Organic Dust Control Solutions**

ArenaKleen® is an effective dust control solution for all types of sand surfaces, preventing dust while eliminating the need for watering. ArenaKleen® provides a safe environment for players and spectators. It helps to preserve the footing as well as maintaining footing consistency for the long term. Unlike water which affects the 'feel' and changes the consistency of the arena footing material, ArenaKleen does not evaporate and does not float any of the footing material so it provides the best "feel" consistently - month after month, always the same. ArenaKleen® is specially made to work in areas where the surface will be continually disturbed thereby rendering most conventional dust control systems less effective or even totally ineffective. **ArenaKleen® never evaporates.**

ArenaKleen® is the only Eco-friendly arena dust control that can eliminate the health hazards caused by dust, improving the consistency, cushioning and traction of your playing surface. An application of ArenaKleen® will eliminate dust, without wasting your precious water resource, creating a clean-air environment for players and spectators. Eliminating dust issues in all types of arenas.

The major component of many arenas is sand. Major health risks caused from Crystalline Silica dust, commonly found in sand is severe and as such has been classified by all major health agencies as a human lung carcinogen.

Other dust control methods such as water, chlorides or binders / wax can only attempt to control dust particles and do not work long term.

ArenaKleen® works because it's specially formulated enabling it to absorb into each individual particle significantly increasing the molecular weight making it too heavy to be suspended in air. This allows the surface to remain loose and so maintaining its draining characteristics. By not floating or surrounding the particles like water does these particles remain in contact with each other increasing traction while maintain consistent performance.

ArenaKleen® is not alkaline, acidic, is non-corrosive, non-hazardous and non-toxic making it safe for people and the environment. ArenaKleen® is not effected by climate or humidity and does not evaporate.

" The ArenaKleen® has been an operational game changer for us! Zero dust ... zero. Incredible!... I would recommend ArenaKleen to any indoor beach volleyball facility."
